

SEO OS - How to Use (Backlink Builder)

Who this is for: Anyone using SEO OS Version 1.0 as a backlink product.

What you will learn: How to go from login -> import websites -> win and verify backlinks.

What SEO OS is now

SEO OS is an AI Backlink Builder.

You work in one main product flow:

```
Import websites
  v
AI Analysis (scores opportunities)
  v
Opportunity Queue -> Pipeline -> Campaigns
  v
Outreach
  v
Link Verification -> Reports
```

Other engines (Browser Intelligence, Knowledge, Memory, Relationships, Campaigns) still run in the background when you import or analyze. You do not need to open those modules separately.

Before you start

1. Sign up / Log in
2. Create an Organization (your company or agency)
3. Create a Project (one project = one website you want backlinks for)
4. Open the project -> you land near Mission Control

Keep using the correct project. Switching projects switches all data.

The sidebar (what you will see)

Home

Item	Use
Mission Control	Backlink KPIs at a glance
SEO AI Assistant	Chat for backlink help

Backlink Builder (expand this section)

Item	Use
Dashboard	Overall backlink pipeline status
Import Websites	Paste/upload target website lists

Explorer	Browse and filter opportunities
AI Analysis	Run classification / scoring pipeline
Opportunity Queue	Approve opportunities for campaigns
Pipeline	Move opportunities through stages
Campaigns	Plan batches of outreach work
Outreach	Email inbox and sends
Relationships	People/companies you contact
Link Verification	Confirm published backlinks
Reports	Export progress for clients/leadership

Workspace

Projects, Team, Organizations, Settings - account and project admin.

Step-by-step: win your first backlinks

Step 1 - Open Mission Control

Check these numbers (they update from live data):

- Imported Websites
- Qualified Opportunities
- Outreach Queue
- Emails Sent
- Replies
- Backlinks Won
- Verified Links
- Success Rate

If everything is `0`, you have not imported yet - that is normal.

Click: Import websites (or open Backlink Builder -> Import Websites).

Step 2 - Import Websites

1. Open Backlink Builder -> Import Websites
2. Paste URLs (one per line), for example:

```
https://example-blog.com
https://industry-directory.org
https://niche-forum.com
```

3. Import / validate the list
4. Run the automation / analysis when prompted

What happens automatically in the background:

- Domains are analyzed and scored into opportunities
- Memory + Knowledge notes can be written for the AI
- Relationship records are seeded
- Light Browser Intelligence scans may start

You stay inside Backlink Builder - no need to open other modules.

Step 3 - AI Analysis

1. Open Backlink Builder -> AI Analysis
2. Confirm the run finished
3. Opportunities should appear as qualified / prepared for review

Tip: Higher scores = better priority for outreach.

Step 4 - Review Opportunity Queue

1. Open Opportunity Queue
2. Read titles, domains, and scores
3. Approve the ones worth pursuing
4. Reject weak or irrelevant sites

Only approved opportunities should move into campaigns.

Step 5 - Pipeline & Campaigns

1. Open Pipeline to see stages (discovered -> qualified -> outreach -> won / verified)
2. Open Campaigns
3. Create or open a campaign
4. Attach approved opportunities

A campaign keeps outreach organized instead of one-off emails.

Step 6 - Outreach

1. Open Outreach
2. Draft or generate emails (use SEO AI Assistant if you need copy help)
3. Review before sending
4. Send / follow up from the inbox

Connect email under Org -> Integrations if sending is not configured yet.

Step 7 - Relationships (optional but useful)

Open Relationships to see companies/contacts created from imports and outreach.

Use this when you need context before a follow-up.

Step 8 - Link Verification

1. Open Link Verification
 2. Check claimed or pending links
 3. Mark verified when the live backlink exists
 4. Wins appear in Mission Control as Backlinks Won / Verified Links
-

Step 9 - Reports

1. Open Reports
 2. Generate a backlink / campaign / monthly report
 3. Export for your client or team
-

SEO AI Assistant (how to use chat)

Open SEO AI Assistant from Home.

Useful prompts:

- Find high-value backlink opportunities
- Prioritize my opportunity queue
- Draft a guest post outreach email
- Which prospects should I contact first?
- Summarize imported websites
- Build an outreach sequence
- Check link verification status

Use it for drafting and decisions - still review outreach before sending.

Daily / weekly rhythm

Daily

1. Mission Control - check KPIs
2. Opportunity Queue - approve new items
3. Outreach - send and reply

Weekly

1. Pipeline cleanup
 2. Link Verification
 3. Report for stakeholders
-

Shortcuts

Shortcut	Action
Ctrl/? + K	Jump to any page
Esc	Close dialogs

Common questions

Where did Knowledge / Memory / Browser Intelligence go?

They still run after import/analysis. They are hidden from the sidebar so Version 1.0 stays focused on backlinks.

Why are my KPIs zero?

Import websites and run AI Analysis first.

Can I work on multiple websites?

Yes - create one Project per website.

Do I need Expert mode?

No. Version 1.0 uses the Backlink Builder navigation for everyone.

Cheat sheet

1. Login -> Org -> Project
2. Mission Control
3. Import Websites
4. AI Analysis
5. Opportunity Queue (approve)
6. Campaigns
7. Outreach (send)
8. Link Verification
9. Reports

That is the whole product flow.
