

SEO OS

Backlink Builder - Step-by-Step Guide

Version 2 - Guided Workflow for Enterprise Users

This guide explains the complete backlink-building workflow in SEO OS.

Follow the numbered steps in the sidebar from start to finish.

Normal users never need Advanced tools. AI handles classification and package type.

Goal: understand the full process in under 30 seconds, then execute confidently.

Workflow overview

Create Project -> Import -> AI Discovery -> Opportunity Review -> Content Studio -> Browser Execution -> Verification -> Reports

Step 1 - Create Project

Where: Sidebar -> Create Project (Settings)

Time: ~2 minutes

What to do

- Confirm project name, domain, industry, and description.
- One project = one website. Keep client sites separated.
- Save changes before continuing.

Tip

Everything in Backlink Builder is scoped to this project.

Step 2 - Import Websites

Where: Sidebar -> Import Websites

Time: ~5 minutes

What to do

- Paste a list of target URLs or upload a file.
- Start the import - AI analysis begins automatically.
- Wait until websites appear in your project library.

Tip

Import first. Classification and scoring run in the background.

Step 3 - AI Discovery & Qualification

Where: Sidebar -> AI Discovery & Qualification

Time: ~5 minutes

What to do

- Review AI classification for each site (directory, guest post, forum, etc.).
- AI detects the submission type - you do not choose it manually.
- Confirm scores and qualification status look reasonable.

Tip

AI routes each opportunity into the correct content + submission workflow.

Step 4 - Opportunity Review

Where: Sidebar -> Opportunity Review

Time: ~10 minutes

What to do

- Open the Pending tab.
- Review Website, Type, Score, Traffic, Difficulty, and Est. Approval.
- Approve strong opportunities (or approve in bulk).
- On Approved rows, click Generate (Content) or Execute (Browser).

Tip

Approve only sites you want to pursue. Reject low-fit opportunities.

Step 5 - Content Studio

Where: Sidebar -> Content Studio

Time: ~10 minutes

What to do

- Select an approved website.
- Let AI generate the submission package for the detected type.
- Review titles, descriptions, body copy, links, and assets.
- Approve the package when ready.

Tip

Directories get listings; guest posts get articles; image/video types get media packs.

Step 6 - Browser Execution

Where: Sidebar -> Browser Execution

Time: ~15 minutes (plus waiting on CAPTCHA / email)

What to do

- Select approved opportunities and click Start Execution.
- Watch natural progress: Opening website... Studying form... Filling details...
- If CAPTCHA or email verification appears, complete it when prompted.
- Use More for Pause, Resume, Retry, or Cancel when needed.

Tip

Estimated approval after submit is often 7-14 days depending on the site.

Step 7 - Verification

Where: Sidebar -> Verification

Time: ~10 minutes

What to do

- Check pending submissions for live backlinks.
- Mark verified wins when the link is published.
- Follow up on delayed or rejected submissions.

Tip

Verified links feed executive reporting and success rate.

Step 8 - Reports

Where: Sidebar -> Reports

Time: ~5 minutes

What to do

- Open Executive Reports.
- Review submitted, verified, pending, and success rate.
- Download Excel, CSV, or PDF for stakeholders.

Tip

Use reports for client updates - no technical worker details required.

What you will see on every page

- Global status: current project, workflow %, AI activity, queued jobs.
- Stage bar: Current stage, Next stage, Progress %, estimated time left.
- One primary action path - Advanced tools stay under Advanced .

Advanced (optional)

- Campaigns, Relationship Hub, Image Studio, Video Studio
- Browser Assistant, Recommendations, Provider Settings
- Runtime Diagnostics, Browser Runtime, Mission Control, Learning, Settings

Human approvals you may need

- Opportunity Approve / Reject
- Content / image / video package approval
- CAPTCHA, login, email, or phone verification during execution
- Final verification of published backlinks
